

INTERNET AND WEB SYSTEMS 1

Charora, Aditi
Report- Week 3

This week mostly I focused on sharing on LinkedIn and now I am able to post on LinkedIn successfully.

For posting I used a POST request to LinkedIn. The https request that I used is as follows:

<https://api.linkedin.com/v1/people/~shares?format=json>

I tried to share on LinkedIn via a comment in the request body containing a URL. Also, in the content section of the request body I used title, description, submitted-URL, submitted-image-URL. After getting the successful response I received HTTP 201 response code and update key and update URL as the response body back. Also, while doing this I learnt that if you share the same post twice it will result in HTTP 400 response code.

Problems:

1. It took me some time to form the proper format of https call to share on LinkedIn.
